

THE FREE CLAUDE SKILL THAT

Tailors your resume for every job.

Resume Tailoring Skill is a free, open-source (MIT) skill for Claude. You give it a job description and your existing resumes. It researches the company and the role, finds your strongest real experience, scores how well each point fits, and builds a tailored resume as Markdown, Word and PDF, plus a report. It never invents experience you don't have.

**amanattar / resume-tailoring-skill**

github.com/amanattar/resume-tailoring-skill · MIT license

[Open repo →](#)**1 or 3–5**jobs at a time: single
job or a batch**4 files**MD + DOCX + PDF +
match report**~15 min**per job, including your
review**\$0**free skill. Needs a paid
Claude plan

Truth-first: it reframes and highlights what you really did. It never adds fake jobs, titles or numbers.

7 steps from job post to resume

1

Builds your library

Reads all your resumes and pulls out roles, bullet points, skills, metrics and keywords.

2

Researches the job

Reads the job description, searches the company and similar people in that role, and builds a "success profile". You confirm it.

3

Plans the resume

Picks section order, which roles to merge or keep apart, honest title options and bullet counts. You approve the plan.

4

Asks smart questions (optional)

A 10–15 min chat to find real experience missing from your resumes, like side projects or volunteering.

5

Matches and scores

Scores every bullet for each slot and shows the top 3 with a confidence %, plus any gaps. You approve.

6

Creates your files

Writes the tailored resume in Markdown and Word (PDF on request) and a report with interview tips.

7

Learns for next time

If you like the result, it saves it to your library so the next resume is even better.

How a bullet is scored

Direct match		40%
Transferable		30%
Adjacent		20%
Impact		10%

Files you get

```
Name_Company_Role_Resume.md
Name_Company_Role_Resume.docx
Name_Company_Role_Resume.pdf # on request
Name_Company_Role_Resume_Report.md
```

Install it in Claude

Before you start

- **Claude Pro, Max, Team or Enterprise** (skills need a paid plan)
- **Your resume(s)** as Markdown (.md) files. More versions = better matches.
- **The job description** as text or a link.
- **10–15 minutes** to answer its questions and review.

Option A • Claude app (claude.ai)

1

Open the GitHub repo (page 1) and click **Code** → **Download ZIP**. Unzip it.

2

Rename the folder to **resume-tailoring** (it must match the skill name), then zip that folder again.

3

In Claude go to **Settings** → **Capabilities** and turn on **Code execution and file creation**.

4

Scroll to **Skills**, click **Upload skill** and choose your ZIP. Then switch the skill **on**.

Option B • Claude Code (terminal)

One command copies the skill into your skills folder:

```
git clone https://github.com/amanattar/resume-tailoring-skill.git \  
~/.claude/skills/resume-tailoring
```

Put your resumes in a folder named **resumes/** in the folder where you start Claude Code. That's the default place it looks.

Just paste the job and talk

Copy one of these prompts

One job

I want to apply for the Product Manager role at Razorpay.
Here's the job description: [paste JD or link]
My resumes are in the resumes/ folder.

Several jobs

I want to apply for these 3 jobs:
1. Product Manager at Razorpay
2. Product Manager at PhonePe
3. Associate PM at Swiggy
Here are the job descriptions: [paste all 3]

In the Claude app, attach your resume files to the chat instead of a folder.

It will stop and ask you

- "Does this success profile look right?"
- "Does this resume structure work?"
- "Want a quick session to find missing experience?"
- "Approve these matches?" then it creates the files.

Best for

- **Freshers & job switchers** showing transferable skills honestly.
- **Applying to many roles** batch mode asks questions once for all jobs.
- **Career gaps** framing a break or startup as real experience.

Good to know

- **Needs existing resumes.** It tailors, it doesn't write from zero.
- **Not for** cover letters or LinkedIn profiles.
- **You apply yourself.** It makes the files; you send them.
